## Tech commentaries:

The **ZIM Shipping** stock price gained **4.19%** on the last trading day (Monday, 6th May 2024), rising from **\$12.88** to **\$13.42**. During the last trading day the stock fluctuated **6.93%** from a day low at **\$12.98** to a day high of **\$13.88**. The price has risen in 6 of the last 10 days and is up by **21.34%** over the past 2 weeks. Volume has increased on the last day along with the price, which is a positive technical sign, and, in total, **4 million** more shares were traded than the day before. In total, **7 million** shares were bought and sold for approximately **\$92.66** million.

Given the current short-term trend, the stock is expected to fall **-3.86%** during the next 3 months and, with a 90% probability hold a price between **\$8.61** and **\$12.90** at the end of this 3-month period. Do note, that if the stock price manages to stay at current levels or higher, our prediction target will start to change positively over the next few days as the conditions for the current predictions will be broken.

Mostly positive signals in the chart today. The **ZIM Shipping** stock holds buy signals from both short and long-term Moving Averages giving a positive forecast for the stock. Also, there is a general buy signal from the relation between the two signals where the short-term average is above the long-term average. On corrections down, there will be some support from the lines at **\$13.10** and **\$10.92**. A breakdown below any of these levels will issue sell signals. A buy signal was issued from a pivot bottom point on **Tuesday, March 19, 2024**, and so far it has risen 45.08%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Volume is rising along with the price. This is considered to be a good technical signal.

**ZIM Shipping** finds support from accumulated volume at \$13.22 and this level may hold a buying opportunity as an upwards reaction can be expected when the support is being tested. There is no resistance from accumulated volume above today's level and given the right condition the stock may perform very well during the next couple of days.

This stock may move much during the day (volatility) and with a large prediction interval from the Bollinger Band this stock is considered to be "high risk". During the last day, the stock moved **\$0.90** between high and low, or **6.93%**. For the last week, the stock has had daily average volatility of **5.76%**.

Several short-term signals are positive, despite the stock being in a falling trend, we conclude that the current level may hold a buying opportunity as there is a fair chance for stock to perform well in the short-term.

Risk: **High**

Evaluation: **Buy Candidate**
