MACD: Buy

Tech commentaries:

No changes to the price of **Bmo Money Market Fund Etf Series** ETF on the last trading day (Friday, 28th Jun 2024). During the last trading day the ETF fluctuated **0.0200%** from a day low at **\$49.89** to a day high of **\$49.90**. The price has risen in 5 of the last 10 days but is still down by **-0.22%** for this period.

The ETF has broken the narrow and horizontal trend down. Breaks like this are often followed by swift and strong movements, and any correction down to the breakline at approximately **\$49.89** is considered to be a "second chance" to get out before further fall. It is, however, important to note that false breaks may appear and that the price may move back into the horizontal trend. A break on increasing volume is considered to be more significant and reliable than breaks on low volume.

A buy signal was issued from a pivot bottom point on **Thursday, June 27, 2024**, and so far it has fallen 0%. Further rise is indicated until a new top pivot has been found. Furthermore, there is a buy signal from the 3 month Moving Average Convergence Divergence (MACD). Some negative signals were issued as well, and these may have some influence on the near short-term development. The **Bmo Money Market Fund Etf Series** ETF holds sell signals from both short and long-term Moving Averages giving a more negative forecast for the stock. On corrections up, there will be some resistance from the lines at **\$50.01** and **\$50.01**. A break-up above any of these levels will issue buy signals. Volume fell during the last trading day while price remained unchanged. This may be an early warning, but it may also not. We still recommend that you pay attention over the next couple of days.

There is no support from accumulated volume below today's level and given the right condition the ETF may perform very badly in the next couple of days. On the upside the ETF meets some resistance just above today's level from accumulated volume at **\$49.93**, **\$50.08** and **\$50.09**.

In general the ETF tends to have very controlled movements and with good liquidity the risk is considered very low in this stock. During the last day, the ETF moved **\$0.0100** between high and low, or **0.0200%**. For the last week the ETF has had daily average volatility of **0.0200%**.

Bmo Money Market Fund Etf Series holds several negative signals and is within a narrow and falling trend, so we believe it will still perform weakly in the next couple of days or weeks. We therefore hold a negative evaluation of this ETF.

Risk: **Low**

Evaluation: **Sell Candidate**
